Yellow bubbles show the **origin (source)** of the call.
Blue bubbles show the **destination** of the call.
The size of each bubble reflects the volume of calls associated with that location.

ATTRIBUTE / METRIC	DESCRIPTION
Abandon Time	The length of time the contact spent in the queue prior to abandoning the call.
Abandons	The number of contacts that spent time waiting to speak to an agent and hung up before the ACD transferred them to an agent. These are not calls that the IVR resolved.
ACW Time	The length of time the agent spent doing after call work.
ANI/From	The phone number from which the call originated.
Handle Time	The amount of time the agent actively handled the contact.
Held	The number of contacts the agents placed on hold.
Hold Time	The amount of time that the contact spent on hold with an agent.
Hold Time %	The percentage of total handle time the agent had the contact on hold.
Holds	The number of times agents placed a contact on hold.
In Queue	The number of contacts that were waiting in the queue for an agent to take the call.
Inbound	The number of valid contacts that entered the NICE inContact network and spent at least two seconds there.
Inbound AHT	The average amount of time the agent spent handling an inbound call.
Inbound Handled	The number of inbound contacts and agent handled.
Inbound Hold Time	The amount of time the agent spent with the inbound contact on hold.
Login Time	The amount of time the agent was logged in to the system.
Long Abandons	The number of contacts that spent more time in the agent queue than you specified in the short abandon interval before hanging up.
Media Type Name	The media type or channel of a contact.
Outbound	The number of outbound contacts an agent or script reached. It includes handled and non-handled contacts.
Outbound AHT	The average amount of time an agent took to handle an outbound call.
Outbound Handled	The number of outbound contacts an agent handled.
Refusals	The number of times an agent refused a single contact.
Refused	The number of contacts the system offered the agent where the agent did not respond. If the system routes the contact to the same agent a second time and they answer the contact, the contact is counted as both a refused call and a handled call for that agent. For this reason, refused and handled may not add up to offered.
